

Forklift Fork Positioners

Fork Positioner for Forklift - A fork positioner is actually an apparatus constructed out of high quality materials designed to be able to endure the most demanding operations and work environments. This piece of equipment enables the one driving to maneuver the forks hydraulically without leaving the seat. Side shifting units have the extra ability to be able to laterally position the arms or the entire load in order to facilitate much more accurate carrying and position in a quicker and much more efficient manner.

The only one of its kind fork pocket design can enable operators to be able to safely swing the unit's blades without any fear of damaging the positioning cylinders. This allows the worker the alternative to either perform independent or simultaneous fork movement, depending on the requirements of the job. For most forklifts with non-OEM carriages, complete carriages are required. Standard OEM carriages could be transformed into blade positioners on existing units.
