

Barrel Clamps

Barrel Clamp - Called "Barrel Clamp", this hydraulic accessory is used on lift trucks so as to compress items which you need to move with the forklift. Normally, they're used in order to paper rolls, barrels, and handle kegs, with a few barrel clamp designs being able to revolve the cargo. For example, the revolving function allows the one operating the forklift to be able to slot in a vertically stored paper inside the horizontal intake of a printing press.
